PREFACE

Apart from the end-of-year statistical assessment of the world fleet of propelled sea-going merchant ships, a major characteristic of this publication is that it is more shiptype oriented - particularly cargo carrying shiptypes. In this edition these have been further broken down to subtype groupings. A further characteristic is that certain time series tables (completions/disposals and losses) will be continually updated from one issue to the next - this reflects the continuous acquisition of data beyond the publication date of the current issue. This continuous acquisition of data and updating of records also applies to ships currently in service, therefore continually adding to the world total number of ships and, because of continuing tonnage re-measurement, further adding to the world total of gross tonnage.

The shiptype categories used in this publication are based upon 'A Categorisation of Ships by Type' shown on the following pages. In addition to non-propelled ships and, more generally, ships of less than 100 gross tonnage, pleasure craft, naval auxiliaries, the US Reserve Fleet, and ships restricted to harbour service or river / canal service, are not included in this publication.

The definitions of the shiptypes comprising the shiptype categories (basic groupings) are based upon primary design function - with hull structure and, for cargo carrying ships the cargo handling mode, or modes, being given due prominence. Hence, the numbers of ships pertaining to the shiptype categories of this new publication may differ from those of the categories used in previous publications.

Each of the tables of data gives the number of ships (No.) and the aggregate gross tonnage (GT) unless otherwise stated - aggregate deadweight (Dwt) for cargo carrying ships, aggregate gas capacity in cubic metres (Gas Cap) for liquefied gas ships, aggregate TEU capacity (TEU Cap) for fully cellular container ships, and aggregate insulated capacity in cubic metres (Ins Cap) for fully refrigerated cargo ships. Where relevant, average age (Age) is also included. Additionally, for the first time, tables 1 to 5 include the Compensated Gross Tonnage value (CGT).

The data of Table 1A and Tables 2A to 2J relate to the world's merchant fleets listed in alphabetical order of registration - with offshore / second registries shown as sub-listings. Table 1B and Tables 3A to 3J are variants of table 1A and Tables 2A to 2J, this time showing the world's merchant fleets by nationality of ownership. It is recognised that information pertaining to certain ship registries is not complete e.g. China.

Completions during the year, Tables 4A to 4B, are shown in alphabetical order of country of build and by nationality of ownership. Table 5A shows the nationality of ownership and shiptype by country of build, where as table 5B shows the country of build and shiptype by the nationality of the owner. The age profile tables (Table 6 to Table 20) also include completions, but as an independent entry.

The principal fleets of the time series Table 21 are defined as fleets of 500 or more ships, or of 1 million or more gross tonnage. The time series Table 22 gives completions pertaining to the majority of the world's shipbuilding countries, shiptype categories, registration and nationality of ownership.

Out-going ships from the world fleet (ship disposals and losses) are considered in this publication only in the form of time series; Table 23 by registration and Table 24 by shiptype category - the current year's data being provisional.

1. Overall Summary

The world fleet of propelled sea-going merchant ships of not less than 100 GT now stands at 86,817 ships of 543.6 million gross tonnage (455.6 million compensated gross tonnage) and an average age of 20 years.

Completions during the year amounted to 1,538 ships of 27.4 million gross tonnage (18.2 million compensated gross tonnage).

Provisionally, ships out-going from the world fleet as losses or disposals totalled 664 ships of 9.9 million gross tonnage and average age of 25 years.

Cargo Carrying Ships

The world's cargo carrying fleet is 46,002 ships of 777.8 million Dwt (515.4 million GT/370.6 CGT) and average age of 18 years.

During the year, completions totalled 1,005 ships of 16.2 million Dwt (26.5 million GT/40.1 million CGT).

Out-going from the world's cargo carrying fleet as disposals or losses were 502 ships of 16.6 million Dwt (9.8 million GT) and average age of 25 years.

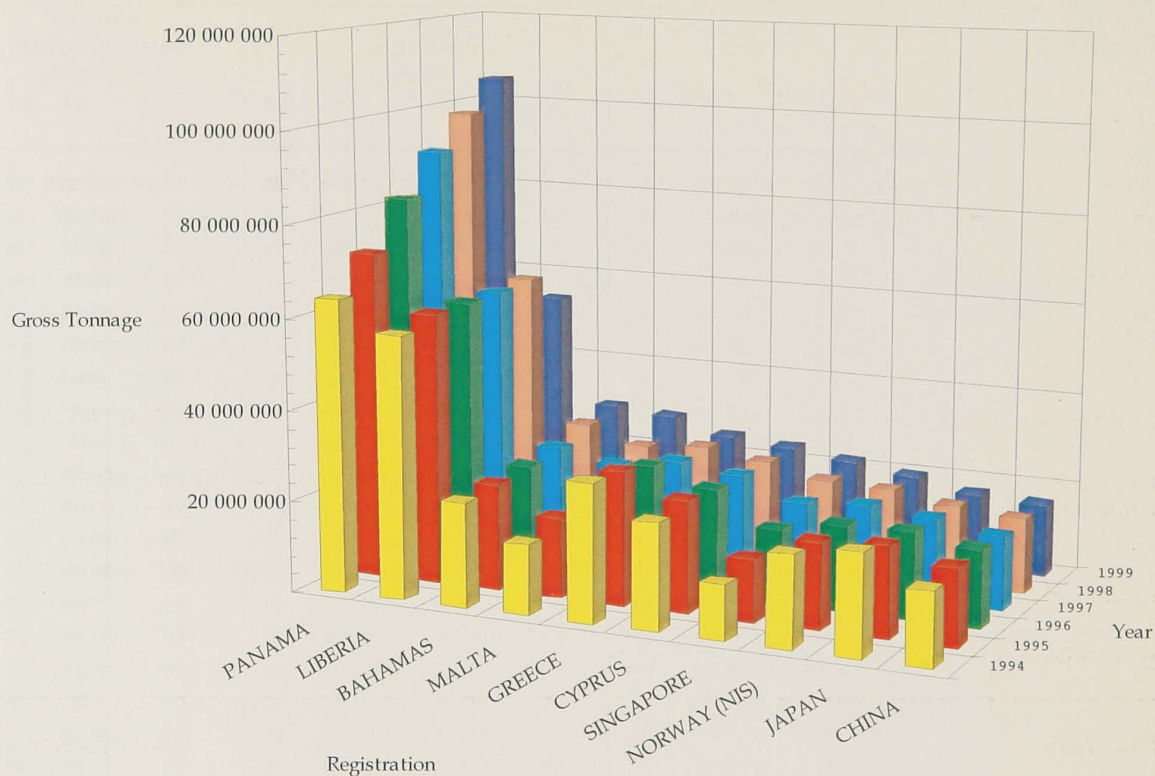

2. Registration

In descending order of gross tonnage, the 20 leading merchant fleets are as follows:-

The following graph shows the relative growth and decline of the top ten countries by registration over the current and last 5 years

Top 10 Merchant Fleets of the World - by Registration

The following graph clearly shows Panama's dominance of the World Fleet in terms of vessel registration with some 20% of all tonnage, followed by Liberia with 10%. Other relative proportions can be seen in Table 1A.

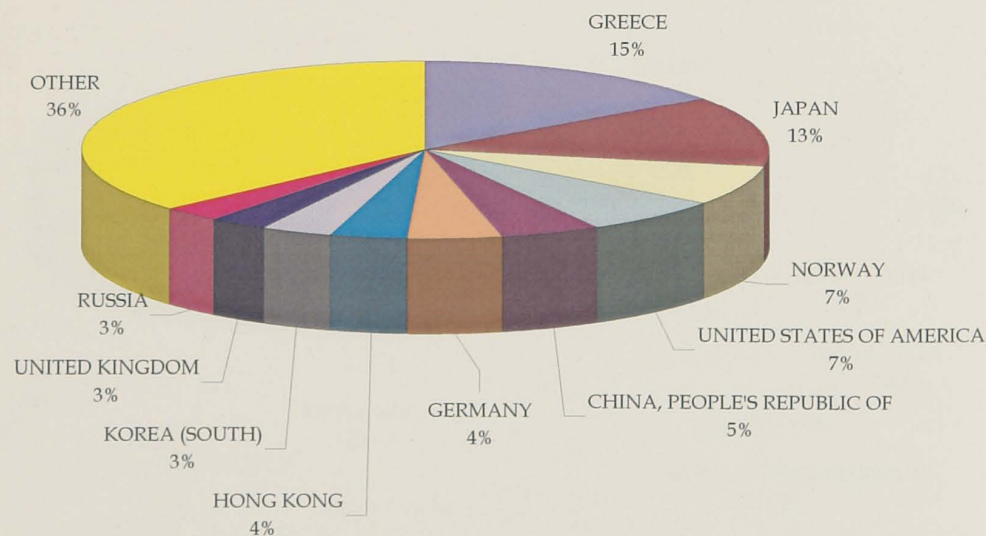

Merchant Fleets of the World - by Registration

Whilst Panama dominates the World Fleet in terms of Gross Tonnage by country of registration this is not the case when you analyse the World Fleet by the Nationality of Owner. The charts below clearly illustrates the difference in the composition of the world fleet when looked at Nationality of Owner. Greece and Japan dominates with 15% and 13% respectively, while other relative differences can be seen below with a full summary in Table 1B

The following series of charts show the relative composition of the World Fleet by shiptype as a percentage of Gross Tonnage.

Composition of the World Fleet - by Shiptype

Oil tankers and bulk dry cargo types have been the two major components of the world's cargo carrying fleet for many years - the following graph shows their deadweight values since 1980. The graph also shows that the general cargo fleet has declined whilst those of the more specialised carriers have steadily increased, particularly the container ship fleet

5. Ship Completions

Japan and South Korea continue to be the world's leading shipbuilding countries - with 40% and 33% of the total completed gross tonnage, respectively.

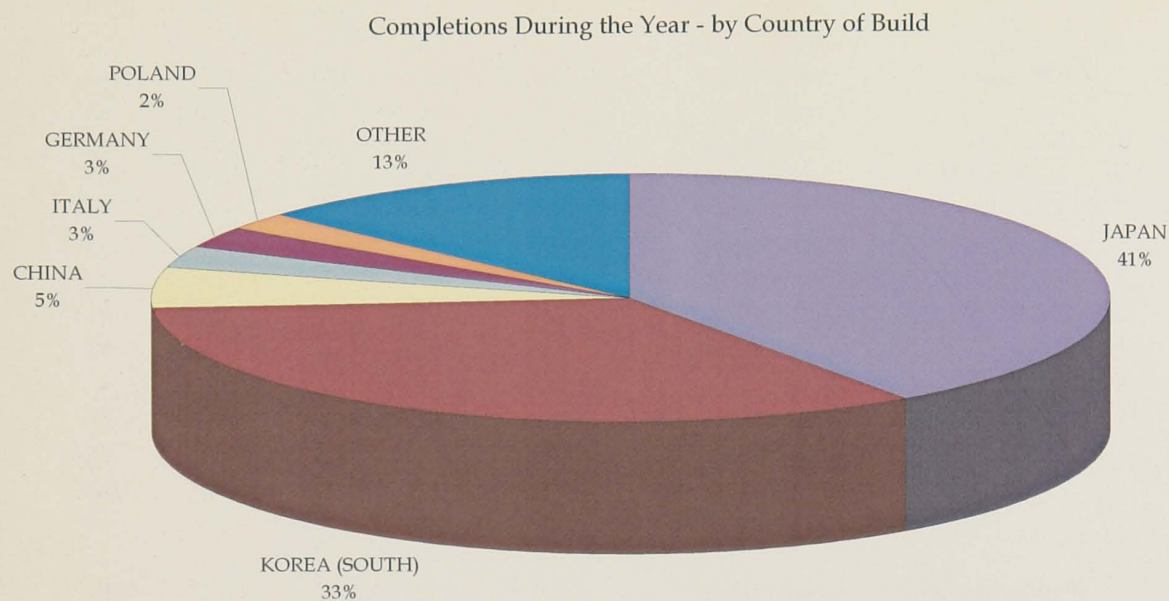

Cargo carrying ships accounted for 97% of the total gross tonnage completed during the year.

Expressed in descending order of deadweight tonnage, the following table considers domestic and export completions for the ten leading shipbuilding countries, for cargo carrying ships only (both GT and Dwt in millions):-

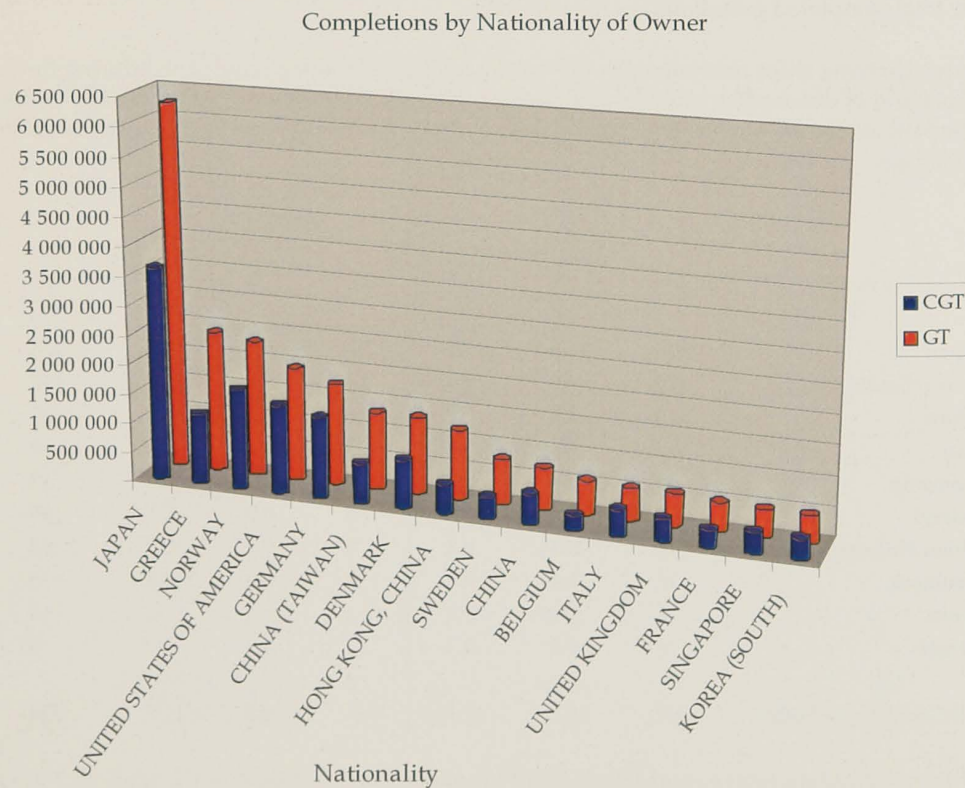

Country of Build	Totals			Domestic			Export

Of over 27 million total export deadweight tonnage completed during the year, 83.2% was built in either Japan or South Korea - oil tankers and bulk carriers accounting for a significant proportion of the tonnage.

The following graph illustrates the domination both Japan and South Korea have in shipbuilding in terms of Gross Tonnage.

In terms of Nationality of Owner, Japan have dominance over the total completions during the year in terms of both Gross Tonnage and Compensated Gross Tonnage, with 23% and 20% respectively. Greece and Norway follow with 8.8% and 8.5% of total Gross Tonnage completed respectively. The relative positions of other countries in terms of both GT and CGT can be seen from the graph below:

The following gives details of some of the principal shiptype categories for domestic and export completions by country of build (both GT and Dwt in millions):-

6. Ship Disposals and Losses

Although provisional at the time of publication, 664 ships of 9.9 million gross tonnage and of average age of 25 years have been out-going from the world fleet during the year. These ships have either been scrapped (disposals), subsequently scrapped after a casualty incident (constructive total loss), or lost at sea (actual total loss).

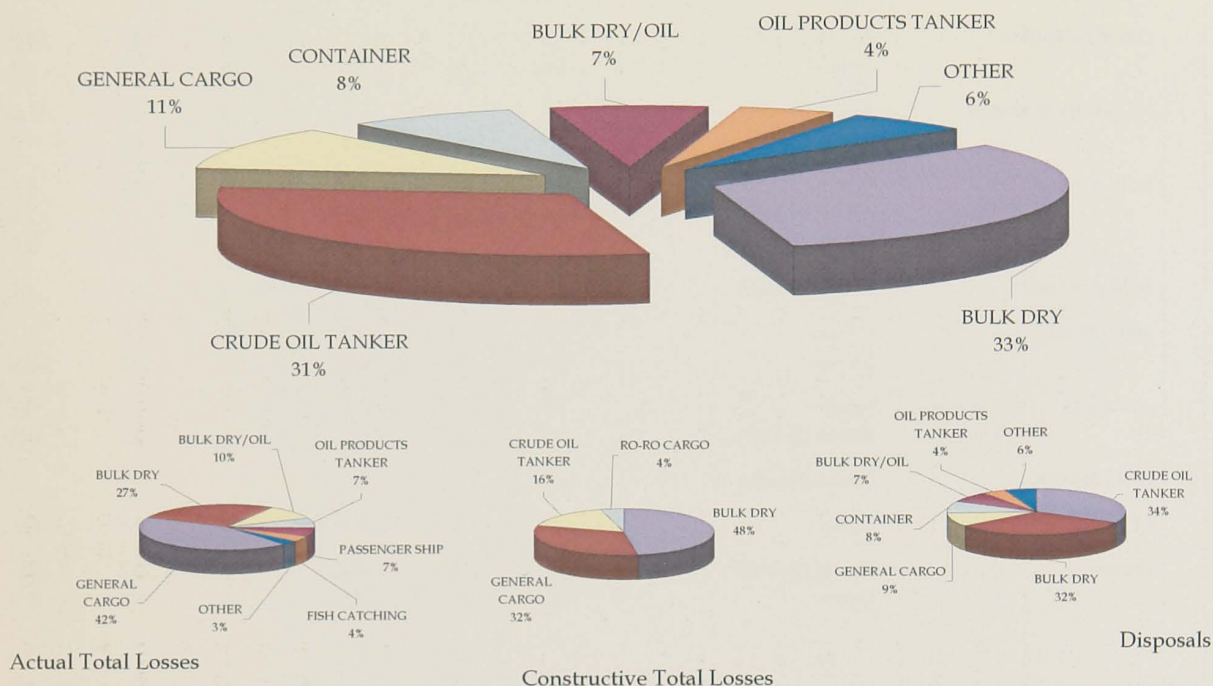

General Cargo ships and fishing vessels are the two largest shiptype groupings of the world fleet and, as expected, this is reflected in the number of disposals and losses.

Details, by shiptype category, are as follows (with GT expressed in millions):-

The graphs below show the overall breakdown of Losses and Disposals together with a breakdown into Actual Total Losses, Constructive Total Losses and Disposals.

Composition Losses and Disposals - by Shiptype

Overall taking losses and disposals in gross tonnage terms bulk dry carriers account for 33% of all vessels outgoing from the fleet as an actual total loss, constructive total loss or disposal, similarly the figure for crude oil tankers is 31%.

In gross tonnage terms, 42% of the year's actual total losses pertained to general cargo ships, similarly for bulk dry carriers the figure for was 27%.

In gross tonnage terms, 48% of the year's constructive total losses pertained to bulk dry carriers, similarly for general cargo ships the figure for was 32%.

Whereas crude oil tankers account for 34% of the (so far reported) gross tonnage scrapped, similarly bulk dry carriers account for 32% of the (so far reported) gross tonnage scrapped.
